Chief, FBIB

Monitoring Tests in Cyprus

1. Attached, for your information, is a copy of the report prepared by the FBIB team which conducted monitoring tests at Zephyros on Cyprus. As a whole, the test results support every expectation for improved broadcast coverage, and indeed constitute a stronger justification for the proposed move from Cairo than communications savings to be realized.

2. Concurrently with the construction of the monitoring station, efforts will be made to adjust the Mediterranean Bureau linguist staff to the indicated expansion of coverage, particularly of USSR regional transmitters, Soviet European satellites and Indian nations.
